Assignment: CCT360_Project 1

Date: Oct 11, 2024

Website Topic: Hart House Symphonic Band redesign

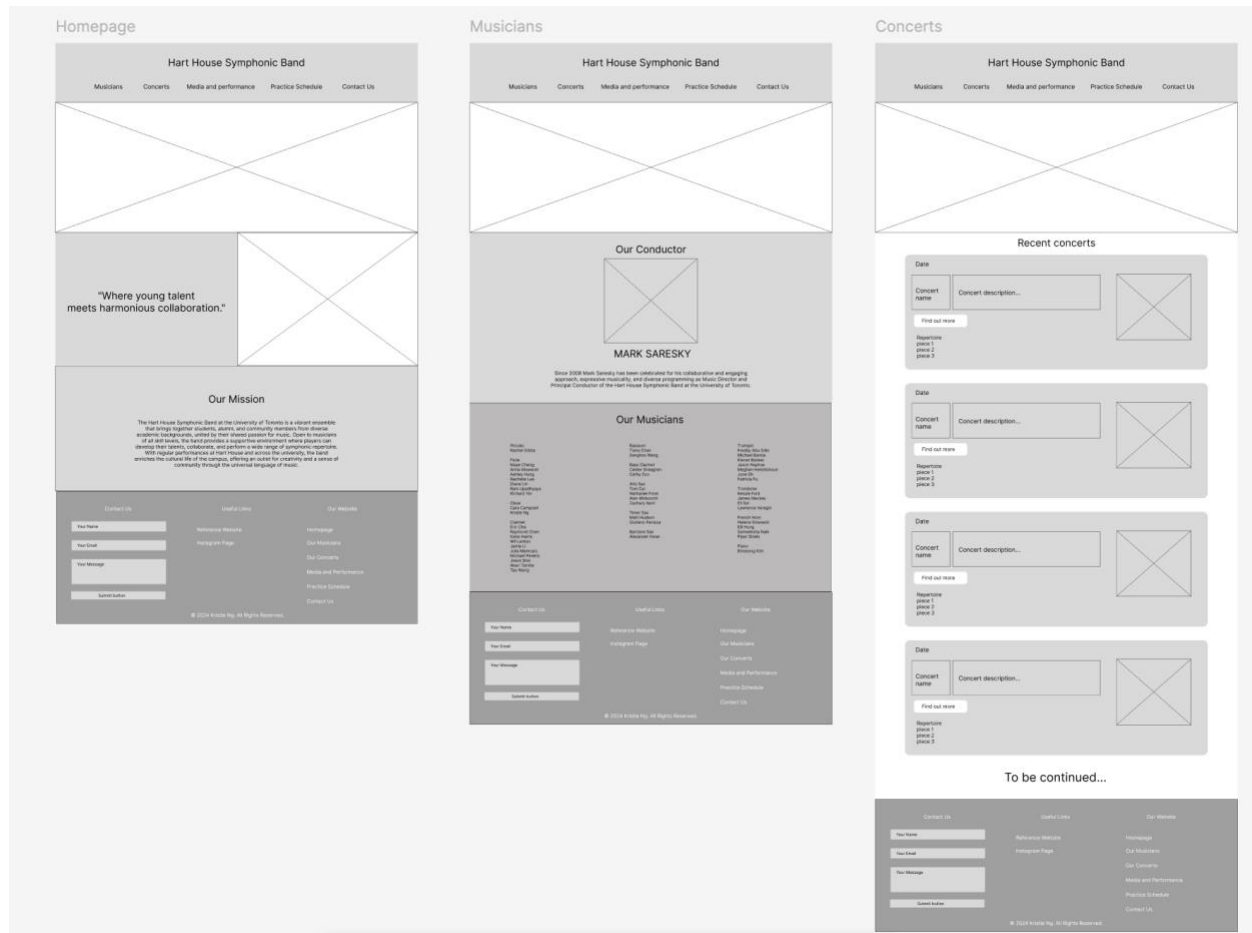

I decided to redesign the Hart House Symphonic Band website because it felt outdated, lacked useful information, and wasn't user-friendly for those seeking more details. This project gave me the opportunity to revamp the site, making it more accessible, promoting our community, and encouraging others with similar interests to join us. Here are some details about my webpage.

IA Map:

The IA map includes structural navigation and utility navigation. Associate navigation is under media and performance which is categorized by concerts. I will allow users to locate the media faster. The structural navigation links to the website are primarily necessary. The utility navigation is for users to contact us, which will include a contact form on the page.

Persona 1:

NAME	Kelly Kim
AGE:	18 years old
OCCUPATION:	Student
LOCATION:	Toronto

USER DESCRIPTION:	
Kelly is a first-year student at the University of Toronto, majoring in business. Although her primary focus is business, she also plays the clarinet and is eager to find opportunities to showcase her talent. She hopes to connect with other students who share her musical interests.	
PERSONAL CHARACTERISTICS:	HOBBIES AND INTERESTS:
• Outgoing • Optimistic	• Likes to play the clarinet • Likes to listen to the music
GOALS:	CHALLENGES:
• To join our symphonic band • Find friends that share common interest	• Lack of comprehensive information on the internet • Lack of platform to connect
NEEDS:	
• Join our team	

Persona 1 is related to my website as it suits the needs of students who seek to join the music community at school. Her personal characteristics, hobbies, and background fit in our symphonic band club, and they have to urge her to broaden her social circle with people who share common interests. This website may be useful for her with all information displayed.

Persona 2:

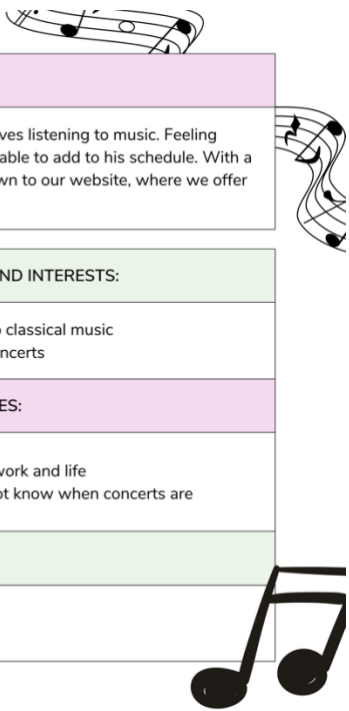

NAME	Charles Stockert
AGE:	33 years old
OCCUPATION:	Data analyst
LOCATION:	Toronto

USER DESCRIPTION:

Charles, a data analyst and University of Toronto alumnus, loves listening to music. Feeling bored with his daily routine, he's looking for something enjoyable to add to his schedule. With a growing interest in classical music concerts, he might be drawn to our website, where we offer free admission to concerts.

PERSONAL CHARACTERISTICS:	HOBBIES AND INTERESTS:
• Appreciation to music • Outgoing	• Listen to classical music • Go to concerts
GOALS:	CHALLENGES:
• Find interesting stuff to do in life • Fill in time after work	• Boring work and life • Might not know when concerts are
NEEDS:	
• Find a concert that is interesting and fun	

Persona 2 is related to our website as he is a potential audience of our concerts. My website includes past and future concert information which targets audiences like Charles who likes classical music.

Usability and accessibility:

Responsive Design

To ensure the website adjusts well to different screen sizes, I added the ``<meta name="viewport" content="width=device-width, initial-scale=1.0">`` tag, making the site responsive across devices. I also used `max-width` on various components to further enhance this flexibility. Additionally, the hover effect on the navbar links, achieved with `::after` transitions, provides visual feedback for sighted users without hindering keyboard navigation. The sticky navigation bar remains at the top of the viewport when scrolling, and the footer offers easy access to both internal pages and external resources, along with a contact form. This ensures users can navigate or reach out from the bottom of the page without needing to scroll back up.

Readability and Accessibility

To enhance readability, I used large font sizes and high contrast between text and background colours (e.g., white text on a black navbar), which is especially helpful for users with visual impairments. I also used semantic HTML with proper heading tags (`<h1>`, `<h2>`, `<h3>`) to structure the content. This not only improves accessibility for users with disabilities but also helps screen readers differentiate between headings and body content. Even users with visual impairments can navigate and understand the structure of the page using assistive technologies. The contact form is also designed with accessibility in mind, using the `<label>` element to properly associate form fields with their descriptions, ensuring screen readers can interpret the form correctly. I also applied consistent fonts throughout the site to maintain readability and avoid confusion.

Navigation

The navigation bar is clearly organized with well-labeled links (e.g., "Musicians," "Our Concerts") so that users can easily find the information they need. The sticky navbar remains visible as users scroll down, improving usability by providing constant access to navigation.
